

## ABSTRACT OF THE DISCLOSURE

A mobile care cart adapted to carry a battery and a fluid supply has a first display to provide battery-related information and a second display to provide fluid supply-related information. The battery may be coupled to patient care equipment located on the cart. The first display may indicate the status of the battery charge level. The cart may include a fluid port located on the cart and coupled to a fluid supply. The second display may indicate if the fluid supply is below a predetermined level. The first and second displays may be located on an upwardly-facing top wall of the cart.
